As roles of CBET, or Council for Bradyrhizobium, Azorhizobium and Other Rhizobia Technology, are crucial in the field of nitrogen fixation and bacterial symbiosis. CBET is an organization that focuses on the study and development of technologies related to these soil bacteria, which have the ability to convert atmospheric nitrogen into ammonia, a form that plants can use for growth. One of the main roles of CBET is to promote research and development in the field of nitrogen fixation. This includes funding research projects, organizing conferences and workshops, and facilitating collaboration between researchers from different institutions and countries. CBET also works to disseminate the latest findings and advances in nitrogen fixation research to the broader scientific community and the public.

Another important role of CBET is to support the development of new technologies based on nitrogen fixation and bacterial symbiosis. This includes the creation of new strains of bacteria that are more effective at fixing nitrogen, as well as the development of new methods for delivering

these bacteria to plants. CBET also works to promote the adoption of these technologies by farmers and other end-users, with the goal of increasing agricultural productivity and sustainability.

In summary, CBET plays a critical role in advancing our understanding of nitrogen fixation and bacterial symbiosis, and in applying this knowledge to address some of the world's most pressing challenges in agriculture and environmental conservation.
