Online Roulette and Randomness An experienced player usually tries to bridge the house advantage by the aid of progression strategies. These strategies are well-known probabilistic

theories that are described in more detail here. These concepts are, however, limited in their effectiveness. But they can give the strategist an advantage over the laity and seem to work for a certain period of time. While the player has to decide on a prediction before the occurrence of a random event, the decision is made randomly. The roulette engine must be designed in a way, that no safe prediction about the next event can be made. So a random event can not be predicted, nevertheless we can look more closely at random events and make certain statements. It is certain that 1 event from 37 or 38 possible random events will occur. The goal of the roulette player is to stand as a winner in as many of these events as possible.

Short History about Roulette

Roulette exists since the 18th century in France and became more popular in the 19th century in Italy, Germany, UK and in the first part of 20th century in US. Nowadays Roulette is famous in most countries of the world. The invention of the roulette wheel was not intended to create a device for one of the most beloved games of gambling. Instead it was thought as wheel of numbers which solidly creates random numbers in a mechanical way and offers the possibility for studying random distributions. There is no proof about the exact age of the roulette wheel. In some sources Blaise Pascal is credited as the inventor, others claim that European traders found the idea of a numbered wheel in China and imported it to Europe.
