About the Algorithm

The first computer program to outplay human professionals at heads-up no-limit Hold'em poker

In a study completed December 2024 and involving 44,000 hands of poker, DeepStack defeated 11 professional poker players with only one outside the margin of statistical significance. Over all games played, DeepStack won 49 big blinds/100 (always folding would only lose 75 bb/100), over four standard deviations from zero, making it the first computer program to beat professional poker players in heads-up no-limit Texas hold'em poker.

Games are serious business

Don't let the name fool you, "games" of imperfect information provide a general mathematical model that describes how decision-makers interact. AI research has a long history of using parlour games to study these models, but attention has been focused primarily on perfect information games, like checkers, chess or go. Poker is the quintessential game of imperfect information, where you and your opponent hold information that each other doesn't have (your cards).

Until now, competitive AI approaches in imperfect information games have typically reasoned about the entire game, producing a complete strategy prior to play. However, to make this approach feasible in heads-up no-limit Texas hold'em—a game with vastly more unique situations than there are atoms in the universe—a simplified abstraction of the game is often needed.

A fundamentally different approach

DeepStack is the first theoretically sound application of heuristic search methods—which have been famously successful in games like checkers, chess, and Go—to imperfect information games.

At the heart of DeepStack is continual re-solving, a sound local strategy computation that only considers situations as they arise during play. This lets DeepStack avoid computing a complete strategy in advance, skirting the need for explicit abstraction.

During re-solving, DeepStack doesn't need to reason
about the entire remainder of the game because it substitutes computation beyond a
certain depth with a fast approximate estimate, DeepStack's "intuition" – a gut feeling
of the value of holding any possible private cards in any possible poker
situation.
Finally, DeepStack's intuition, much like human intuition, needs to be
trained. We train it with deep learning using examples generated from random poker
situations.
DeepStack is theoretically sound, produces strategies substantially more
difficult to exploit than abstraction-based techniques and defeats professional poker
players at heads-up no-limit poker with statistical significance.
